

Request for Offers

Ammunition inventory management system (AIMS) for states

Introduction

The Geneva International Centre for Humanitarian Demining (GICHD) is pleased to invite consultants to submit a quotation for the provision of the description of the goods or the services described below as per requirements set out in this request for offers.

Reference number: RFO/2023/MAF02/

Project number: 91061

Posting date: 20.02.2022

Deadline for submission of the Request for Quotation form: 28 February.2023, 23.59, Geneva Time.

Currency: The quotation shall be presented in Swiss Francs (CHF)

Language: The quotation shall be submitted in English

Submit to: consultants@gichd.org

Scope of work

The GICHD requires the services of competent system developers to programme an ammunition inventory management system (AIMS) for states to support the account and management of their stockpile. The system will rely upon the implementation of robust manual processes at depots and store holding units, ensuring effective management of ammunition, to provide accurate and coherent information. This will be achieved by providing a comprehensive, user-friendly, secure system compatible with even low-capacity state computing infrastructure, thus not requiring costly upgrades.

The system developed shall meet the following minimum requirements:

Stockpile data requirements

- 1) The system shall hold a nation's inventory of ammunition natures in an auditable account
- 2) For each ammunition record the system shall hold:
 - Ammunition nature

- A nationally defined unique identifier for each nature
 - Quantity
 - NEQ per round
 - Stock holding or depot facility where held
 - BKI or manufacture date
 - Condition code
 - Pack quantities – as an optional field
 - Ban field that indicates a ban is in place
 - Text field – why ban applied, when ban applied and who was notified in depots/store holding units
- 3) The system shall hold and facilitate searches on the following information for each ammunition holding unit or depot:
- Natures held
 - Quantity of each nature
 - Quantity of nature by condition code
 - Total NEQ for each nature
 - Stock holding unit or depot's name or identifier
 - Detail of updates including date
 - Detail of stock-taking activity
- 4) The system shall allow the inventory to be updated from information provided by the nation's stock holding unit or depot accounts, recording the date and user making the update.
- 5) The system shall hold a transaction history for each change in account that will include:
- Location (Stock holding unit or depot)
 - Ammunition nature
 - Change in condition code
 - Transaction type (receipt, issue, transfer, stock-take, disposal)
 - Receipt & issue unique identifiers for transactions
 - Date
 - Quantity
 - Authority
- 6) The system shall enable planned receipts to be scheduled on depots or stock holding units and will match the actual receipt record from the depot/stock holding unit with the scheduled receipt record. The schedule records that shall include:
- Receipt unique identifier
 - Depot allocated to receive the receipt
 - Notification date and operative in depot
 - Scheduled delivery date
 - Ammunition natures
 - Ammunition quantity to be received
- 7) The system shall enable planned issues to be scheduled on depots or stock holding units and will match the actual issue made from the depot/stock holding unit with the scheduled issue record. The schedule records that shall include:

- Issue unique identifier (number?)
 - Depot allocated to make the issue
 - Notification date/operative in depot
 - Scheduled issue date
 - Ammunition natures
 - Ammunition BKI/manufacture dates
 - Ammunition quantity
- 8) The system shall record updates to the account as time stamped transactions linked to the originating stock holding unit or depot with the reason for any amendment and the authority
- 9) The system shall enable stocktaking activities to be recorded to authenticate the account that is held against a stock holding unit or depot
- 10) The system shall allow amendments to be recorded against the account following stock-taking with details of stocktaking date, operative undertaking the stock-take, reasons for the amendment and a record of follow up actions instigated
- 11) The system shall support the characterization of stock (by nature and by storage location) as:
- Operational
 - War reserve
 - Training
 - Disposal

User Requirements:

- 1) The system shall allow interrogation of the account by:
- Nature
 - Condition
 - Stock holding unit or depot
 - Transactions (all changes made to the account), by transaction type
 - Date ranges for transactions including by transaction type
- 2) The system shall allow the production of user defined reports, based upon searches of the entities or attributes held by the system under the control of the account administrator, who will define user search privileges and access
- 3) The system shall allow the formatting and printing of the user defined reports under the control of the account administrator, who will define user printing privileges and access

Data Capture requirements

- 1) The system shall allow updates to the account to be delivered by manual input, import from USB stick or across the isolated network where it reaches into the depots or stock holding units
- 2) The system shall support data transfer from MS Excel & MS Access export files

System requirements:

- 1) The system shall be password protected
- 2) The system shall be modular and not reliant upon software held externally to the user nation or hosting upon a server
- 3) The system shall enable the account to be regularly backed-up to a device that can be secured off site
- 4) The system's users shall have access to 1st line support from within the national resources or by phone from out of country resources
- 5) The nation shall have access to centralised out of country 2nd line support
- 6) The system shall operate on a Windows PC
- 7) The system shall be fully documented to facilitate 2nd line support and future development
- 8) The system shall allow the creation and definition of admin and user roles, linked to individual login details. The admin role will create, configure, and manage the user roles.
- 9) The system shall record each logon by user, time, date, and action taken
- 10) The system shall be designed to facilitate further development with the addition of functions for instance stocktaking initiation at depots
- 11) The system will allow data recovery in instances of errors for instance data deleted in error. This may require the use of timestamp to allow the system to be rolled back
- 12) The 'system' shall provide robust procedures for the management of ammunition to create the environment for the launch of AIMS

Delivery dates of the services

The provider must be able to provide a pilot system by 31 Mar 2023. The final system should ideally be operational by 30 Jun 2023.

Estimated workdays to deliver the services

100 days

Legal requirement

Interested candidates/entities must provide a guarantee that they are registered as an independent legal entity.

By applying to the tender, the applicant authorizes the GICHD to use their personal information to administer the tender and for internal purpose only.

Location

The task is expected to be conducted remotely, but occasional meetings in person are expected.

The consultant shall provide a coherent, organized and clear proposal in response to the request.

Name of the company: ADD NAME

Name of individual: ADD NAME OF INDIVIDUAL

Address: ADD ADDRESS

Proposals

Consultant: ADD QUALITATIVE NARRATIVE ON HOW TO UNDERTAKE THE WORK OR DELIVER THE SPECIFIED GOODS OR SERVICES
--

In your technical offer, please clarify and address the following points related to the system and the after-delivery services:

- What supporting documentation will the company provide for the system?
- How does the company envisage providing a training package for users of the system?
- Please provide a detailed plan for how you would support the system, including any requirements that GICHD/AMAT would be expected to facilitate.
- What are the minimum specifications for the hardware on which the system will be installed?
- A description of your proposed solution that explains how it will satisfy the requirements.

- If you have a readymade system that can meet the above requirements, what development and modifications are required to meet the system requirements, with costs and timescales for each?
- What software licences will be required to operate the system?
 - Please provide indicative software licence costs where possible.
- Please indicate the programming languages to be used.
 - Please provide an indication of the sustainability/supportability of the programming language.
- It is preferred that the system should operate as an Isolated Network, so please indicate how any software updates etc. will be distributed.
- The system must operate as a minimum in the English language. Please indicate how you would include an ability to add additional languages.
- What approach will the company adopt for change requests, collated and approved by GICHD/AMAT, that arise out deployment of the system?

Availability

Consultant: ADD TEXT TO CONFIRM CAPACITY TO DELIVER THE SPECIFIC GOODS AND SERVICES WITHIN THE REQUIRED TIME LINE

Pricing

Please provide a detailed costing model for the system in CHF. As a minimum this should cover equipment, software and development, training and support.
